WELDING TECHNOLOGY FOR RAILWAYS

www.msw.co.at

LASER CUTTING & BENDING

Laser cutting is the very basis of state-of-the-art sheet metal working. This technology is also used for precision cutting of pipes and hollow profiles. MSW GmbH always keeps sufficient stocks of pre-finished materials plus the required certifications and test reports, which translates into fast turn-around and top quality for our customers.

CNC MACHINING

In our machine shop, highly skilled workers operate state-of-the-art CNC turning, drilling, milling and cutting machines and press brakes. This enables us to supply complete solutions ranging from raw parts to finished parts with maximum productivity in cutting and shaping.

Our clients know us as experienced suppliers with a strong track record, whose design and manufacturing capabilities contribute to safe and cost-effective solutions in the transport & mobility sector.

MSW GmbH is certified: we are TÜV-certified at level CL1 in accordance with DIN EN 15085-2. We are a leading Austrian metal-working company serving the infrastructure and transport sectors and support our customers in implementing their projects in compliance with standards at reasonable cost. Our product portfolio includes machine room equipment, track sweepers, steps and handles as well as roof elements for Vienna's ULF tram, electric control cabinets for the China-Taurus locomotives, and air grills for Swiss double-decker train cars.

WELDING

Apart from certified welders, MSW also employs test personnel certified pursuant to EN473, levels 1-3.

Precision in even the smallest detail – for we believe that only the best products are good enough!

FINISHING

SURFACE TREATMENT
As specified by the customer, we paint finished parts by applying layers of coating with high precision, including multi-colour applications. Alternatively, we offer electro-plating or powder-coating with corrosion protection by means of electrophoresis.

ASSEMBLY OF COMPONENTS
If required by the client, parts produced in-house or purchased from external sources are assembled professionally and accurately. Ongoing quality management ensures that end products are faultless. If needed, we assist our clients in monitoring production from an early planning stage.
